

Innovative Anilox Roller Technology

Chrome and NSC coated Anilox Roller electronically engraved

An innovative **ZECHER** development, each cell is engraved by a master diamond. The advantages, in comparison to the milling technology, are to be seen as:

Precise definition of cell geometry

Optimized cell volume

Adjustable to your needs

This engraving technique enables a wide range of engraving options. High volume engravings are adjustable. An individual setup can be realized according to the selection of the engraving diamond.

After engraving into a special copper surface, the following surface enhancements can be applied:

Chrome-plating, NSC-coating
Hard-Chrome-plating, **I.T.S.**-surface treatment

Individual adjustment of inking properties

Our Sales team is at your service.
